

Elkins' Saw Clamp and Guide,

*Patented
Aug. 29, 1882,*

IS A CLAMP to which is fixed a File Handle, moving through guides, which can be **instantly** set to any **pitch or bevel** desired. The handle holding the file moves freely through the guide, making every tooth **exactly alike in pitch and bevel.**

It is complete in itself; two screws secure it to the bench, when it is ready for use; is **light, strong and durable**, with no loose parts to get out of order or be lost. It can be packed in a small space when not in use, and is adapted to all kinds of saws, from the finest to the coarsest, except circular.

By its use the experienced Saw Filer is enabled to save time and files and to form the teeth with greater precision than by hand, while the inexperienced person is enabled to file equal to the best.

Ask your Hardware Dealer for it. If he will not get it for you, we will send it to you, packed in a neat box, on receipt of **\$3.00**. Parties ordering together will save on express charges.

Agents Wanted in All Parts of the Country.
